

Call for intent
Professor position in the Chemistry Department
École Normale Supérieure de Lyon

The École Normale Supérieure de Lyon is among the leading research and higher education institutions in France (5th place in the QS rankings 2023, the only institution outside Paris in the top 10).

We are considering the possibility of opening a full professor position in Chemistry, with the research and teaching projects summarized below. Researchers interested to apply on this position are invited to contact Agilio Padua (agilio.padua@ens-lyon.fr), Stephan Steinmann (stephan.steinmann@ens-lyon.fr) and Tangui Le Bahers (tangui.le_bahers@ens-lyon.fr) before 01/10/2022.

Research activities: The professor will be a member of the “Theoretical Chemistry and Molecular Thermodynamics” axis of the Laboratoire de Chimie (<http://www.ens-lyon.fr/CHIMIE>). The new professor will propose a world-leading research program on the application or development of quantum chemical methods in topics related to, or complementing, the existing research of the axis.

Teaching activities: The professor will integrate the Chemistry Department of the ENS de Lyon (<http://chimie.ens-lyon.fr/>) to provide teaching in physical chemistry and advanced quantum chemistry. Our students are admitted at the 3rd year of higher education through a highly selective procedure. They study at ENS de Lyon for 4 years to complete their diploma and many enroll in doctoral studies.
